PYXON helps organizations redesign the way work gets done. By combining cloud modernization, Robotic Process Automation (RPA), Microsoft Dynamics 365 ERP, and the Power Platform, we build a digital workforce that handles repetitive tasks while your teams focus on higher-value work. Measurable results from our cloud modernization and automation solutions Our approach combines advanced cloud technologies, intelligent automation, and industry best practices to ensure seamless transitions with minimal disruption. Whether you are refactoring existing applications, adopting microservices, integrating DevOps pipelines, or deploying multi-cloud environments, PYXON delivers end-to-end solutions tailored to your strategic goals. Faster time to market Modern DevOps practices Streamlined operations Built-in compliance With modern, cloud-powered systems, organizations gain improved reliability, reduced operational costs, enhanced user experiences, and the agility needed to innovate quickly in today's fast-changing digital landscape. Comprehensive cloud readiness evaluation and strategic roadmap development Seamless workload migration with minimal disruption to operations Scalable, reliable, and cost-optimized cloud infrastructure design Accelerate delivery with modern DevOps practices and toolchains Container orchestration with Kubernetes and Docker for portable applications Enterprise-grade security and regulatory compliance for cloud environments Transform legacy applications into modern, cloud-native solutions Build modern applications designed for cloud scalability and resilience We build a digital workforce that takes care of repetitive, data-heavy tasks while your teams focus on higher-value work. The result: faster processes, fewer errors, and a more resilient digital enterprise. Design and implementation of RPA solutions across finance, HR, operations, customer service, and supply chain End-to-end implementation and rollout of Microsoft Dynamics 365 ERP Building line-of-business apps with Power Apps to digitize manual forms and workflows Enterprise-grade RPA platform for large, complex, and highly regulated environments Flexible RPA and automation platform for building, orchestrating, and scaling bots quickly Cloud-native automation tightly integrated with Microsoft 365, Dynamics, and Azure services Our automation philosophy: automation should augment people, not replace them Significant reduction in operational costs as bots handle high-volume work 24/7 Automated processes follow defined rules every time, improving accuracy Digital workers operate 24/7 with no downtime Measurable impact within the first 90 days of go-live Every step is logged, auditable, and aligned with regulations Automations that support your people, not replace them Transform your legacy systems into agile, cloud-native platforms and build a digital workforce with PYXON's expert guidance. A culture of curiosity, ownership, and impact — where engineers, architects, and problem-solvers work on real AI, IoT, and cyber challenges across the MEA region. Interested in joining us? - Cloud-Native Architecture
- DevOps & CI/CD Pipelines
- Container Orchestration
- Multi-Cloud Strategy
- Cloud readiness assessment
- TCO analysis and optimization
- Migration strategy planning
- Lift-and-shift migration
- Application re-platforming
- Database migration
- Infrastructure as Code (IaC)
- Multi-cloud architecture
- Auto-scaling configuration
- CI/CD pipeline implementation
- Automated testing integration
- Release management
- Docker containerization
- Kubernetes orchestration
- Service mesh implementation
- Security architecture design
- Compliance automation
- Identity and access management
- Legacy application assessment
- Microservices refactoring
- API modernization
- Serverless architecture
- Event-driven design
- Cloud-native patterns
- Orchestration of bots for repetitive, rule-based processes
- Integration of AI, analytics, and workflows
- Smart, self-monitoring automations
- Digital workforce that augments people
- Finance, Supply Chain, Commerce modules
- Process mapping and fit-gap analysis
- Integration with RPA bots
- Extensions following Microsoft best practices
- Power Apps for business applications
- Power Automate for cross-system processes
- Power BI for self-service analytics
- Center of Excellence setup
- Human-Centric Automation - We design automations that support your people and co-create solutions

with business teams

- Deep Microsoft Expertise - Strong experience in Dynamics 365 and Power Platform, integrated with

RPA and AI

- End-to-End Delivery - From process discovery and business case definition to build, deployment, and

managed services

- Regulated Industry Experience - Familiar with controls and documentation for banking, insurance,

government sectors

- Local & Regional Understanding - Based in the Middle East, we understand regional regulations and

culture

- AI Innovation
- IoT and Smart Solutions
- AI-driven Cybersecurity
- Cloud DevOps and Modernization
